DETAILED ACTION

Response to Remarks

1. The Office Action has been issued in response to amendment filed March 4, 2008. Claims 1, 3-5 and 8-20 are pending.

Allowance

2. The following is an examiner's statement of reasons for allowance: The most pertinent prior art is Avant et al (US Patent No.: 6,977,353) and Moed et al (US Patent No.: 5,770,841). Avant discloses a method for identifying and processing mail in a mail sorting system, comprising the steps of: (a) scanning a surface of each mail piece with at least one imaging camera to obtain at least one image of the surface represented by image data (b) analyzing the image data to locate a destination bar code in the image; (c) analyzing the bar code to recognize a first destination code; (d) if the first destination code meets predetermined criteria, then processing the mail piece further in a manner dependent on the first destination code (e) if the first destination code cannot be recognized or fails to meet the predetermined criteria, then analyzing the image data to locate destination address lines in the image, analyzing the address lines to determine a second destination code, and processing the mail piece further in a manner dependent on one of the second destination code, or a result determined by arbitrating the first and second destination codes. However, Avant does not disclose conveying a series of the mail pieces and carrying out steps (a) to (e) concurrently for more than one mail piece

at a time as the mail pieces are moving on the conveyer. Moed discloses a method for reading package information that includes the step of conveying a series of the mail pieces and carrying out steps (a) to (e) concurrently for more than one mail piece at a time as the mail pieces are moving on the conveyer. Note the discussion above neither Avant nor Moed disclose conveying a series of the mail pieces on a conveyor having a pair of upright belts holding each mail piece from either side for transport on edge and scanning a surface of each mail piece with at least one imaging camera to obtain at least one image of the surface represented by image data and carrying out steps (a) to (e) concurrently for more than one mail piece at a time as the mail pieces are moving on the conveyor, wherein the conveyor transports the mail pieces past a series of diverters used for sorting the mail pieces to the sorting destinations, and completing steps (a) to (e) for each mail piece before each mail piece reaches a first one of the diverters. The examiner finds no reason or motivation to combine the above references in an obvious rejection thus placing the application in condition for allowance.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

4. Claims 1, 3-5 and 8-20 are allowed now renumbered claims 1-17.

Conclusion

The prior art made part of the record and not relied upon is considered pertinent to applicant's disclosure.

Mampe et al (US Patent No.: US 7,145,093) is cited to teach system and method for image processing.

Hansel et al (US Patent No.: US 7,136,504) is cited to system for processing postal items.

Bayer (US Patent No.: US 6,888,084) is cited to teach a method and device for sorting parcels.

Daniel, Jr. et al (US Patent No.: US 6,796,433) is cited to teach a method of post processing OCR information obtained from mail pieces.

Bruce et al (US Patent No.: US 6,741,724) is cited to teach a method and system for form processing.
